Siemens Gamesa, Iberdrola and the Basque Government to power first wind farm in the Basque Country in two decades

Siemens Gamesa has reached a agreement with Aixeindar (a company owned by Iberdrola and the Basque Energy Agency) for the supply of wind turbines for the Labraza wind farm in the Basque Country, Spain. The project will have a total capacity of 40 MW and marks the first wind farm to be developed in the region in the past twenty years. This means increasing the capacity already installed in the Basque Country by one third.

Kerman Gabiola, Spain Managing Director Siemens Energy and Siemens Gamesa: “Labraza wind farm is a great and important project for the Basque Country, and we are proud that we can realize this wind farm together with our long-time partner Iberdrola, and the Basque Energy Agency, using a lot of components manufactured on the Iberian Peninsula. The local added value is therefore very high. It is the first wind farm to be built in the Basque Country in the last two decades, marking a significant step forward in the revival of wind energy in the region.”

The eight turbines sold are of the type SG 5.0-145 (2.0), a 5 MW turbine initially developed as part of the 4.X platform. Following a temporary pause in sales for technical updates, the turbine is now available again and part of this latest order.

Each of those turbines can supply electricity to approximately 4,000 homes. Once operational, the eight turbines will provide clean energy to more than 30,000 households - equivalent to the population of municipalities such as Getxo or Toledo. The project will also help avoid the emission of more than 100,000 tonnes of CO_2 annually, comparable to the emissions of more than 50,000 vehicles.

Spain is the world's fifth-largest country in terms of installed wind power capacity. Siemens Gamesa currently has more than 16 GW of installed capacity in Spain.

About Siemens Gamesa Renewable Energy

Siemens Gamesa unlocks the power of wind. For more than 40 years, we have been a pioneer and leader of the wind industry, and today our team of more than 29,000 colleagues work at the center of the global energy revolution to tackle the most significant challenge of our generation: the climate crisis. With a leading position in onshore, offshore, and service, we engineer, build and deliver powerful and reliable wind energy solutions in strong partnership with our customers. A global business with local impact, we have installed more than 143 GW and provide access to clean, affordable and sustainable energy that keeps the lights on across the world.
